BASE CABINET CONSTRUCTION

1/ FIRMLY GLUED BODIES WITH A THICKNESS OF 18 MM

Only firmly glued bodies from material with a thickness of 18 mm have the required strength, durability and prevent the unwanted deformation of shelves.

2/ COVERING OF ALL EDGES

The covering of all edges, including the back wall, prevent formaldehydes from being released into the environment.

3/ LEGRABOX

Cabinetry is fitted with BLUM drawerslides with a bearing capacity of up

4/ NARET FEET

NARET plastic feet have an increased bearing capacity and enable the convenient stabilization of the lower cabinets. Available in the two sizes 100 mm and 150 mm.

5/ EDGE BANDING MADE BY POLYURETHANE GLUE

Adhesive, based on polyurethane, creates a flexible but at the same time durable bond with tight joints, made up from insoluble film. After compressing it has a high resistance against water as well as against the effect of heat: 284-302°F, which is two times more than in standard used adhesives.

6/ EDGE BANDING FOR INNER DRAWERS

The lower and upper cabinets, shelves and decorative panels use edge banding ABS edge including rear edge. This wholly cast off the board surface and guarantee zero leakage of pollutants into the room. At the same time it increases the usefulness of cabinetry.

WALL CABINET CONSTRUCTION

1/ FIRMLY GLUED BODIES WITH A THICKNESS OF 18 MM

Only firmly glued bodies from material with a thickness of 18 mm have the required strength, durability and prevent the unwanted deformation of shelves.

2/ COVERING OF ALL EDGES

The covering of all edges, including the back wall, prevents formaldehydes from being released into the environment.

3/ SAFETY SHELF LOCK

Special locks in the upper cabinets keep shelves firmly in place. Thickness is 18 mm as is the carcass.

4/ ADJUSTABLE HANGERS

Hangers have the necessary bearing capacity and enable the convenient hanging of the upper cabinets.

5/ TOP BLUMOTION HINGE CLIP

The cabinetry is fitted with the highest range of BLUM hinges. TOP BLUMOTION hinges provide ease of movement along with a lifelong guarantee.

6/ EDGE BANDING MADE BY POLYURETHANE GLUE

Adhesive, based on polyurethane, creates a flexible but at the same time durable bond with tight joints, made up from insoluble film. After compressing it has a high resistance against water as well as against the effect of heat: 284-302°F, which is two times more than in standard used adhesives.

BLUM DRAWERS

LEGRABOX white

HANS KRUG
FINE EUROPEAN CABINETRY

provides

LEGRABOX anthracite

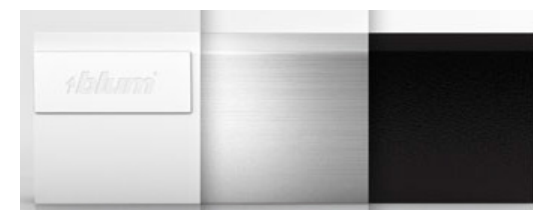

Perfecting motion

We use Blum Legrabox systems for all cabinets, clients can have their choice between Anthracite, White, or Stainless Steel, These elegant box systems are characterized by slim designs, high load bearing capacity and a particularly high quality of motion. The streamlined design and innovative technology used by Blum has won several international awards.

LEGRABOX stainless steel

BLUM AVENTOS – LIFT SYSTEMS

HANS KRUG
FINE EUROPEAN CABINETRY

provides

 **blum**®

Perfecting motion

AVENTOS Lift Systems For Quality Of Motion And Freedom Of Design. These are the ideal solution for high and mid wall units and offer a multitude of design possibilities and enhanced user convenience.

- 18 mm thickness
- Covering of all edges
- Edge banding made by polyurethane technology
- 17 Colors available
- 0% Emission
- Certified materials
- Color matching with the fronts

OPTIMAcollection | Laminate

COLORS

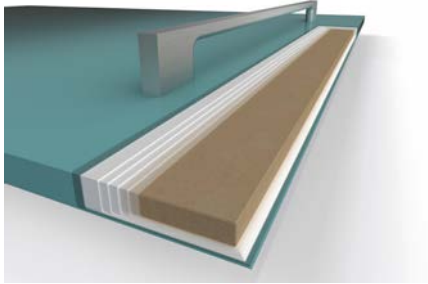

- High Quality ABS Edge
- 26 Variety of Finishes: wood grain, textured and high gloss options
- MFC Core 18mm: Wood fibers bound with synthetic glue are compressed with extreme pressure at a high temperature to form the substrate.
- Heat Resistant: To temperatures up to 932 °F.
- Water and Humidity Resistant: Using PUR – TERMOSET technology
- Harmless to Health: sealed surfaces prevent the release of formaldehyde (emission class E1LE and has CARB Phase 2 certification)
- 10 year warranty on the finish

DOORS STYLES

PREMIUMcollection | 7-layers Lacquer

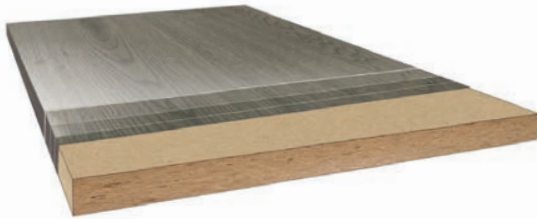

- 7 Layers of Lacquer: five base layers of acrylic lacquer are applied to all sides, then two final layers of polyurethane lacquer are applied with either glossy or matte finish.
- MDF Core 18mm: Wood fibers bound with synthetic glue are compressed with extreme pressure at a high temperature to form the substrate.
- Heat Resistant: To temperatures up to 932 °F.
- Water and Humidity Resistant: Using PUR – TERMOSET technology
- Harmless to Health: sealed surfaces prevent the release of formaldehyde (emission class E1LE and has CARB Phase 2 certification)
- 20 year warranty on the finish

+

- Natural Wood Species: Walnut, Oak, Makassar, Bamboo, Tineo, Zebrano, Wenge, Palisander
- Variety of Finish Options: Matte and high gloss, patina and painted veneer options
- 4 Layers of Lacquer: four layers of polyurethane lacquer are applied for high gloss veneers
- MDF Core 18mm: Wood fibers bound with synthetic glue are compressed with extreme pressure at a high temperature to form the substrate.
- Harmless to Health: sealed surfaces prevent the release of formaldehyde (emission class E1LE and has CARB Phase 2 certification)
- 10 year warranty on the finish

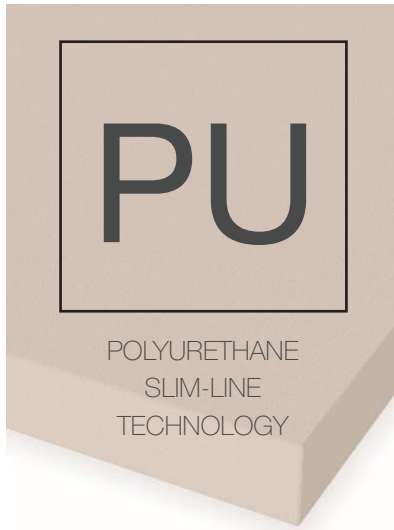

EXPEDITION | SHIPMENT

- Seafreight | Airfreight
- Standard assembled units
- Air bags for safe delivery
- Express order & Claims - shorter delivery
- 9-12 weeks door to door delivery
- We ship the order directly to your warehouse location
- Consolidation of orders when possible for lower freight costs
- Plastic feets

THE BIGGEST ADVANTAGES OF HANS KRUG CABINETRY

SLIM-LINE TECHNOLOGY

Our cabinets are built using SLIM-LINE (PUR-TERMO-SET) technology, the industry leading edge banding process which results in water resistant joints, standard for all cabinet interiors

HEALTH SAFETY

Our products are made using certified materials that meet or exceed industry standards. Using sealed surfaces and dense, non-porous surfaces makes our products safer.

MOISTURE RESISTANCE

7 layer lacquer on all sides and edges of lacquered parts create a compact and closed surface which is completely waterproof. The new edge gluing technology with the help of polyurethane-based glues create a watertight connection and thus prevents the entrance of atmospheric humidity and water into the interior of units.

ENVIRONMENTALLY FRIENDLY

We do our best to keep our production environmentally friendly. We have been awarded certificates for Quality Management Control ISO 9001 and for Environmental Management System ISO 14001. We work to continually improve the quality of our products and services, and therefore we are able to meet the changing requirements and wishes of our customers.
